collaboration with the nursing staff taking into consideration the difficulties they may encounter.

Conclusion and relevance This training made it possible to raise awareness of the proper use of the anti-return valves to secure them in a secure way. It has helped to foster collaboration between pharmacy preparers and the nursing staff, the nurse bringing his technical knowledge of the care and the pharmacy preparer on the equipment. A post-training audit will be organized within a few months in the cardiology intensive care unit.

On the strength of this success, we wish to continue the development of trainings dispensed by a pharmacy technician and a nurse of another care service.
