

Appendix 2. Level 2 assessment for modules 1 and 2.

-
1. What is the recommended time, in seconds, for hygienic handwashing?
 - A. 10–30
 - B. 30–60
 - C. 60–90
 - D. 90–120

 2. What is the recommended time, in seconds, for hand disinfection?
 - A. 10–20
 - B. 20–30
 - C. 30–40
 - D. 40–50

 3. In a cleanroom, what is the minimum recommended time interval between glove disinfections when under laminar flow?
 - A. Every 5 minutes
 - B. Every 10 minutes
 - C. Every 15 minutes
 - D. Every 20 minutes

 4. Which step is part of the handwashing procedure?
 - A. Rub thumbs circularly
 - B. Rub back of the hands
 - C. Rub the forearms
 - D. All the above answers

 5. What is the easiest way to destroy bacteria on your hands?
 - A. Handwashing with water and soap
 - B. Handwashing with water
 - C. Using a handrub with hydroalcoholic solution
 - D. Using a handrub with chlorhexidine solution
-

-
6. What is the recommendation for drying hands after washing them?
- A. Drying by rubbing
 - B. Drying in air
 - C. Drying with a hand towel
 - D. Drying by tapping
7. Why cannot we use a hydroalcoholic solution to disinfect gloves?
- A. The quantity of alcohol in the solution is too low
 - B. The emollient agent included in the solution makes gloves permeable
 - C. The hydrogen peroxide in the solution is corrosive to gloves
 - D. None of the above answers: hydroalcoholic solution can be used to disinfect gloves
8. Why should hands be completely dry when applying hand disinfectant?
- A. To lower the risk of alcohol dilution
 - B. To lower the risk of skin irritation
 - C. To lower the risk of forgetting some parts of the hands
 - D. To lower the risk of contamination from bacteria in water
9. What is chlorhexidine's role in disinfecting the gloves?
- A. It accelerates the drying of the product
 - B. It has a virucidal action
 - C. It lengthens the bactericidal action of alcohol
 - D. It creates a protective film on the hands
-
